

Keep Your Baby Smiling . . .

PREVENT BABY BOTTLE TOOTH DECAY

Suggestions to comfort your baby at bedtime:

Your child may cry or fight giving up the bedtime bottle. The following suggestions can help:

- ♥ Give a clean pacifier.
- ♥ Give a favorite blanket or toy.
- ♥ Hold or rock your child.
- ♥ Read to your baby.
- ♥ Sing or play music.
- ♥ Give a back rub.
- Use a musical toy.

If your baby is used to sleeping all night at the breast, these suggestions can also help make the change to sleeping in his/her own bed easier.

Remember, you are making these changes out of love.

What one thing will you do to make sure your child's teeth are healthy?

Does Your Child:

- Go to bed with a bottle filled with milk, formula, or a sweetened drink?
- Sleep all night at the breast?
- Drink from a bottle throughout the day?
- Use a pacifier dipped in sugar or honey?

If your child does one or more of the above, he/she may develop "baby bottle tooth decay."

Baby bottle tooth decay happens when liquids that contain sugar are left in a baby's mouth for a long time. Even breast milk and formula contain sugar.

Baby teeth are important. When they are decayed, a child may suffer pain, eating and speech problems, and a poor self-image. If baby teeth are lost too early, the permanent teeth may come in crowded or out of line.

Start Early to Protect Your Child's Teeth

1. Put your child to bed without a bottle.*
2. Don't let your baby sleep all night at the breast.
3. Begin teaching your child to drink from a cup around six months of age. Start juice from a cup.
4. Avoid pop and other sweet drinks and don't let your child drink from a bottle all day long.
5. Wean your baby from the bottle by one year of age.
6. Clean your child's teeth and gums with a clean washcloth or a small, soft toothbrush before bedtime.
7. Check with your doctor or dentist to make sure your child is getting enough fluoride each day. Fluoride protects teeth from decay.

* If your baby must have a bottle to sleep, fill it with plain water. You may need to gradually dilute the bottle contents until only water is offered.
